# USING EPIDEMIOLOGY TO ENHANCE PUBLICATION

## 13-14 MARCH 2019

### OBJECTIVES

This workshop proposes to cover the basic epidemiologic concepts that are frequently used in preparing good research paper suitable for publication in top international journals. For each topic multiple examples are provided. Additionally, participant interaction are encouraged by sharing experience and concerns related to the course objectives. By the end of the workshop, the participants should get familiar with the following epidemiologic/ publication topics:

- Writing and publishing a good paper
- Questionnaire development and validation
- Study design
- Sampling and sample size
- Measuring disease occurrence
- Adjustment and standardization
- Measuring association
- Evaluating association
- Causation
- Screening accuracy
- Regression and Survival

### WHO SHOULD ATTEND

- Researches
- Epidemiologists
- Public health professionals
- Residents / master students who plan to do Thesis
- Those working in medical research or medical reports.
